Hydrologic and Geologic Aspects of Waste Management and Disposal: A Bibliography of Publications by U.S. Geological Survey Authors, 1950-81

By Elinor H. Handman

ABSTRACT

References to more than 550 reports, articles, and maps are listed alphabetically by author and are indexed by subject. The subject index includes geographic-area terms. Citations from 69 series are included; series are listed separately.

The publications listed report the results of U.S. Geological Survey research and field projects throughout the Nation concerning earth-science aspects of waste management and disposal. They include organic, inorganic, and radioactive wastes and related topics such as mathematical models of solute transport.

Most of the references are to (1) Geological Survey report series such as Water-Supply Papers, Professional Papers, Bulletins, Circulars, Water-Resources Investigations, and Open-File Reports, (2) technical journals of professional organizations, or (3) reports by other Federal and State agencies.

INTRODUCTION

The U.S. Geological Survey's program of research and field projects relating earth science to waste management has been increasing in recent years. The program has resulted in numerous reports, articles, and maps on various aspects of waste management and on related topics such as ground-water contamination and contaminant transport. These publications are a result of the Survey's current programs and projects and previous investigations, including cooperative programs with State agencies.

This circular includes references to more than 550 reports, articles, and maps on waste management and closely related topics that were published from 1950 to 1981 in U.S. Geological Survey reports, in technical journals of

professional organizations, and in cooperative agency reports. It does not include references to reports on the geology or hydrology of an area unless the reports also include information specifically related to waste management.

Reports and maps published by the Survey on the geology and hydrology of individual States are listed in "State Lists," which are available from the Eastern Distribution Branch, Text Products Section, U.S. Geological Survey, 604 South Pickett Street, Alexandria, Virginia 22304.

New publications of the U.S. Geological Survey are listed in two series: (1) "New Publications of the Geological Survey," which is published monthly and may be ordered from the Mailing List Unit, U.S. Geological Survey, 582 National Center, Reston, Virginia 22092; and (2) "Publications of the Geological Survey," which is published annually and may be ordered from the Eastern Distribution Branch, Text Products Section, U.S. Geological Survey, 604 South Pickett Street, Alexandria, Virginia 22304.

This bibliography lists publications alphabetically by author and includes full title and publication information. Citations by the same author are arranged chronologically. A separate subject index includes geographic-area headings, and a series list gives titles of 69 periodicals and series publications. The price and availability of numbered open-file reports on paper or microfiche may be obtained from the Open-File Services Section, U.S. Geological Survey, Box 25425, Federal Center, Denver, Colorado 80225.

Most of the publications cited in this bibliography may be consulted in large public libraries and in many college and university libraries.

BIBLIOGRAPHY

Most of the bibliographic information was provided by GeoRef, a bibliographic database of the American Geological Institute. The format for citing publications differs slightly from standard U.S. Geological Survey style. Abbreviations for series are spelled out in the Series list beginning on p. 39.
