## The NASA STI Program Office ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA's scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA's counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.
- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or cosponsored by NASA.
- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and mission, often concerned with subjects having substantial public interest.
- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that complement the STI Program Office's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results . . . even providing videos.

For more information about the NASA STI Program Office, see the following:

# **BOREAS TE-5 Tree Ring and Carbon Isotope Ratio Data**

Jim Ehleringer, J.Renee Brooks, Larry Flanagan

## **Summary**

The BOREAS TE-5 team collected several data sets to investigate the vegetation-atmosphere CO<sub>2</sub> and H<sub>2</sub>O exchange processes. These data include tree ring widths and cellulose carbon isotope data from coniferous trees collected at the BOREAS NSA and SSA in 1993 and 1994 by the BOREAS TE-05 team. Ring width data are provided for both *Picea mariana* and *Pinus banksiana*. The carbon isotope data are provided only for *Pinus banksiana*. The data are provided in tabular ASCII files.

## **1. Data Set Overview**

### **1.1 Data Set Identification**

BOREAS TE-05 Tree Ring and Carbon Isotope Ratio Data

### **1.2 Data Set Introduction**

Tree ring widths were collected from trees from Old Black Spruce (OBS) in the BOREal Ecosystem-Atmosphere Study (BOREAS) Southern Study Area (SSA), Upland Black Spruce (UBS) in the Northern Study Area (NSA), and Old Jack Pine (OJP) in the SSA and the NSA. The carbon isotope ratio of cellulose was measured on individual tree rings from 1974 to 1994 for the OJP sites, two trees from each site.

### **1.3 Objective/Purpose**

The purpose of this study was to measure year-to-year variation in ring widths and carbon isotope ratios in the conifers at the northern and southern sites. These data were compared with year-to-year variations on meteorological measurements in an attempt to find whether variables have influenced both diameter growth and carbon isotope discrimination. Investigators studied whether controlling climate variables were the same in the north as in the south.

## **1.4 Summary of Parameters and Variables**

Annual ring widths (mm)

Carbon isotope ratios

## **1.5 Discussion**

Tree cores were collected at both the NSA and SSA in both 1993 and 1994 at the OJP, OBS, and OBS (T6R56) sites. These data can be compared to determine differences in growth rates and possible effects of climate variables during the time frame recorded by tree ring widths. The tree ring isotope data ranges can be used to determine the relative concentration of C isotopes based on knowing the relative assimilation by trees at different sites.

## **1.6 Related Data Sets**

BOREAS TE-05 Diurnal CO<sub>2</sub> Canopy Profile Data

BOREAS TE-05 Leaf Carbon Isotope Data

International tree ring data base (<http://tree.ltrr.arizona.edu/~grissino/itrdb.htm>)

### **3. Theory of Measurements**

Annual variation in tree ring width represents variation in stem growth. Annual variation in  $\delta^{13}\text{C}$  of cellulose represents the annual variation of carbon isotope discrimination by the tree. For complete information on stable carbon isotope ratios, see Coleman and Fry (1991). The stable carbon isotope ratio ( $^{13}\text{C}/^{12}\text{C}$ ) is not presented as an absolute but as the relative difference between the isotope ratios of the sample and standard gases:  $\delta^{13}\text{C} (\text{o/oo}) = ((R_{\text{sample}} / R_{\text{standard}}) - 1) * 1000$ , where  $R_{\text{sample}}$  and  $R_{\text{standard}}$  are the  $^{13}\text{C}/^{12}\text{C}$  ratios of the plant sample and standard Pee Dee Belemnite (PDB). The overall precision of the measurements of cellulose materials was  $\pm 0.11 \text{ o/oo}$ .

### **4. Equipment**

#### **4.1 Sensor/Instrument Description**

Isotope ratio mass spectrometer ( $\delta$  S, Finnigan Mat, San Jose, CA). Measuring stage for tree ring widths (Fred C. Henson, Mission Viego, CA).

##### **4.1.1 Collection Environment**

NSA and SSA black spruce and jack pine sites. Carbon isotopes of cellulose were measured only for the last 20 years of growth (1994-1974).

##### **4.1.2 Source/Platform**

Dominant conifer trees, which were considered to be those trees that were clearly taller than the surrounding trees, were chosen.

##### **4.1.3 Source/Platform Mission Objectives**

The purpose of this study was to understand the relationship between environmental variables and annual variation in tree ring widths and carbon isotope ratios.

##### **4.1.4 Key Variables**

Year  
Annual ring widths (mm)  
Annual cellulose carbon isotope ratios

##### **4.1.5 Principles of Operation**

None.

##### **4.1.6 Sensor/Instrument Measurement Geometry**

Not applicable.

#### **4.1.7 Manufacturer of Sensor/Instrument**

Mass spectrometer:  
Finnigan Mat  
355 River Oaks Parkway  
San Jose, CA 95134  
(404) 424-5284

Measuring stage:  
Fred C. Henson Co.  
28362 Marguerite Parkway  
Mission Viejo, CA 92691-1523  
(714) 831-9192

#### **4.2 Calibration**

Ring width calibration: Calibration on the measuring stage was checked prior to each use. The nature of the measuring stage is such that the calibration is extremely stable and no adjustments were ever needed.

Carbon isotope calibration: The mass spectrometer is calibrated to standard PDB gas. This international standard was a limestone of fossil *Belemnitella Americana* from the Cretaceous Pee Dee formation in South Carolina. In addition, a standard cellulose sample was run after every 12 cellulose samples.

##### **4.2.1 Specifications**

None.

##### **4.2.1.1 Tolerance**

Annual ring widths:

Precision: 0.01 mm

Carbon isotope ratio

Precision: 0.1

##### **4.2.2 Frequency of Calibration**

Mass spectrometer: 1 in every 12 samples was a cellulose standard. Mass spectrometers are maintained by Craig Cook at the University of Utah.

Measuring stage: Calibration was tested prior to every use.

##### **4.2.3 Other Calibration Information**

None.

### **5. Data Acquisition Methods**

At each site, four to six dominant trees were cored or slabs were collected for analysis. All slabs and cores were collected at breast height (1.3 m). Slabs were collected from trees that were destructively harvested for biomass estimates (see other BOREAS Terrestrial Ecology (TE)-06 documentation). In the lab, slabs and cores were sanded so that tree rings were clearly visible. For each tree, ring widths were measured from two directions and averaged together. Prior to measuring ring widths, tree rings were counted along both measuring directions and checked to ensure that each count was the same. Skeletal plots were created for each tree and compared for all trees within a plot to ensure comparable dating for all the trees. Aging these trees was very straightforward from diameter at breast height (dbh); however, it was understated that this is not the absolute age of the tree because time and growth were needed for the tree to reach dbh (for more details see: Cook and Kairiukstis, 1990). Each tree ring chronology begins at the last year of growth (1993 or 1994, depending on when the sample was collected) and ends at the year the tree reached 1.3 m (center of the slab).

Carbon isotopes of cellulose were measured only for the last 20 years of growth (1994-1974). To collect enough cellulose material for isotope analyses, only tree slabs were used. For each year, sample material was collected from four sides of the slab to ensure annual uniformity. Tree rings were carefully separated using an exacto knife while viewed under a 40x dissecting scope. Care was taken to include tissue only from the year of interest in the sample. Cellulose was extracted from the wood samples following the method outlined in Leavitt and Danzer (1992). Cellulose samples were then analyzed on the mass spectrometer for delta  $^{13}\text{C}$ .

## **6. Observations**

### **6.1 Data Notes**

None given.

### **6.2 Field Notes**

None given.

## **7. Data Description**

### **7.1 Spatial Characteristics**

#### **7.1.1 Spatial Coverage**

The North American Datum of 1983 (NAD83) coordinates of the sites are:

- NSA-OJP flux tower site: Lat/Long: 55.927°N, 98.62°W; Universal Transverse Mercator (UTM) Zone 14, N:6,197,997 E:523,501.
- SSA-OJP flux tower site: Lat/Long: 53.916°N, 104.69°W; UTM Zone 13, N:5,951,000 E:479,400.
- NSA-UBS canopy access tower site (auxiliary site number T6R5S, BOREAS Experiment Plan, Version 3).
- SSA-OBS flux tower site: Lat/Long: 53.985°N, 105.122°W; UTM Zone 13, N:5,981,904 E:492,000.

#### **7.1.2 Spatial Coverage Map**

Not available.

#### **7.1.3 Spatial Resolution**

These data represent point measurements of the sampled trees that may be representative of a larger area.

#### **7.1.4 Projection**

Not applicable.

#### **7.1.5 Grid Description**

Not applicable.

### **7.2 Temporal Characteristics**

Not applicable.

#### **7.2.1 Temporal Coverage**

Ring width measurements:

NSA-OJP: 1994-1939

NSA-UBS (T6R5S): 1994-1944

SSA-OJP: 1994-1902  
SSA-OBS: 1994-1867

Carbon isotope data:  
NSA-OJP and SSA-OJP: 1994-1974

### 7.2.2 Temporal Coverage Map

Not applicable.

### 7.2.3 Temporal Resolution

Annual.

## 7.3 Data Characteristics

### 7.3.1 Parameter/Variable

The parameters contained in the data files on the CD-ROM are:

Column Name
SITE_NAME
SUB_SITE
START_DATE
END_DATE
SPECIES
TREE_RING_YEAR
TREE
TREE_RING_WIDTH
CELLULOSE_DELTA_C13
CRTFCN_CODE
REVISION_DATE

### 7.3.2 Variable Description/Definition

The descriptions of the parameters contained in the data files on the CD-ROM are:

Column Name	Description
SITE_NAME	The identifier assigned to the site by BOREAS, in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with site type.
SUB_SITE	The identifier assigned to the sub-site by BOREAS, in the format GGGGG-IIIIL, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIIL is the identifier for sub-site, often this will refer to an instrument.
START_DATE	The date on which the collection of data commenced.
END_DATE	The date on which the collection of the data was terminated.
SPECIES	Botanical (Latin) name of the species (Genus

TREE_RING_YEAR	species).
TREE	The year of the tree ring growth.
TREE_RING_WIDTH	The individual tree from which measurements were taken.
CELLULOSE_DELTA_C13	The width of the tree ring growth.
CRTFCN_CODE	Relative difference of the C13 isotope between the sample and a standard.
REVISION_DATE	The BOREAS certification level of the data. Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI but questionable).
	The most recent date when the information in the referenced data base table record was revised.

### 7.3.3 Unit of Measurement

The measurement units for the parameters contained in the data files on the CD-ROM are:

Column Name	Units
SITE_NAME	[none]
SUB_SITE	[none]
START_DATE	[DD-MON-YY]
END_DATE	[DD-MON-YY]
SPECIES	[none]
TREE_RING_YEAR	[none]
TREE	[none]
TREE_RING_WIDTH	[millimeters]
CELLULOSE_DELTA_C13	[unitless]
CRTFCN_CODE	[none]
REVISION_DATE	[DD-MON-YY]

### 7.3.4 Data Source

The sources of the parameter values contained in the data files on the CD-ROM are:

Column Name	Data Source
SITE_NAME	[BORIS Designation]
SUB_SITE	[BORIS Designation]
START_DATE	[Human Observer]
END_DATE	[Human Observer]
SPECIES	[Human Observer]
TREE_RING_YEAR	[Human Observer]
TREE	[Human Observer]
TREE_RING_WIDTH	[Human Observer]
CELLULOSE_DELTA_C13	[Laboratory Equipment]
CRTFCN_CODE	[BORIS Designation]
REVISION_DATE	[BORIS Designation]

### 7.3.5 Data Range

The following table gives information about the parameter values found in the data files on the CD-ROM.

Column Name	Minimum Data Value	Maximum Data Value	Missng Data Value	Unrel Data Value	Below Detect Limit	Data Not Cllctd
SITE_NAME	NSA-9BS-9TETR	SSA-OJP-FLXTR	None	None	None	None
SUB_SITE	9TE05-TRC01	9TE05-TRC01	None	None	None	None
START_DATE	09-AUG-93	30-AUG-94	None	None	None	None
END_DATE	29-AUG-93	19-SEP-94	None	None	None	None
SPECIES	N/A	N/A	None	None	None	None
TREE_RING_YEAR	1867	1994	None	None	None	None
TREE	A	I	None	None	None	None
TREE_RING_WIDTH	.04	4.815	None	None	None	None
CELLULOSE_DELTA_C13	-25.37	-22.11	None	None	None	Blank
CRTFCN_CODE	CPI	CPI	None	None	None	None
REVISION_DATE	12-AUG-97	12-AUG-97	None	None	None	None

Minimum Data Value -- The minimum value found in the column.

Maximum Data Value -- The maximum value found in the column.

Missng Data Value -- The value that indicates missing data. This is used to indicate that an attempt was made to determine the parameter value, but the attempt was unsuccessful.

Unrel Data Value -- The value that indicates unreliable data. This is used to indicate an attempt was made to determine the parameter value, but the value was deemed to be unreliable by the analysis personnel.

Below Detect Limit -- The value that indicates parameter values below the instruments detection limits. This is used to indicate that an attempt was made to determine the parameter value, but the analysis personnel determined that the parameter value was below the detection limit of the instrumentation.

Data Not Cllctd -- This value indicates that no attempt was made to determine the parameter value. This usually indicates that BORIS combined several similar but not identical data sets into the same data base table but this particular science team did not measure that parameter.

Blank -- Indicates that blank spaces are used to denote that type of value.

N/A -- Indicates that the value is not applicable to the respective column.

None -- Indicates that no values of that sort were found in the column.

### 7.4 Sample Data Record

The following is a sample of the first few records from the data table on the CD-ROM:

```
SITE_NAME,SUB_SITE,START_DATE,END_DATE,SPECIES,TREE_RING_YEAR,TREE,
TREE_RING_WIDTH,CELLULOSE_DELTA_C13,CRTFCN_CODE,REVISION_DATE
'NSA-9BS-9TETR','9TE05-TRC01',30-AUG-94,19-SEP-94,'Picea mariana',1957,
'D',1.63,, 'CPI',12-AUG-97
'NSA-9BS-9TETR','9TE05-TRC01',30-AUG-94,19-SEP-94,'Picea mariana',1954,
'D',1.935,, 'CPI',12-AUG-97
```

## **8. Data Organization**

### **8.1 Data Granularity**

The smallest unit of data tracked by the BOREAS Information System (BORIS) was that collected at a given site on a given date.

### **8.2 Data Format(s)**

The Compact Disk-Read-Only Memory (CD-ROM) files contain American Standard Code for Information Interchange (ASCII) numerical and character fields of varying length separated by commas. The character fields are enclosed with single apostrophe marks. There are no spaces between the fields.

Each data file on the CD-ROM has four header lines of Hyper-Text Markup Language (HTML) code at the top. When viewed with a Web browser, this code displays header information (data set title, location, date, acknowledgments, etc.) and a series of HTML links to associated data files and related data sets. Line 5 of each data file is a list of the column names, and line 6 and following lines contain the actual data. Each row represents an annual record beginning with the year.

## **9. Data Manipulations**

### **9.1 Formulae**

None.

#### **9.1.1 Derivation Techniques and Algorithms**

None.

### **9.2 Data Processing Sequence**

#### **9.2.1 Processing Steps**

None.

#### **9.2.2 Processing Changes**

None.

## **10. Errors**

### **10.1 Sources of Error**

Other than normal background error associated with the instrumentation, there are no other sources of error. The overall precision of the measurements of cellulose materials was  $\pm 0.11$  o/oo.

### **10.2 Quality Assessment**

None given.

#### **10.2.1 Data Validation by Source**

None given.

#### **10.2.2 Confidence Level/Accuracy Judgment**

None given.

#### **10.2.3 Measurement Error for Parameters**

None given.

#### **10.2.4 Additional Quality Assessments**

None given.

#### **10.2.5 Data Verification by Data Center**

Data were examined for general consistency and clarity.

### **11. Notes**

#### **11.1 Limitations of the Data**

Small sample sizes.

#### **11.2 Known Problems with the Data**

There are no known problems with the data.

#### **11.3 Usage Guidance**

None.

#### **11.4 Other Relevant Information**

None given.

### **12. Application of the Data Set**

Tree ring and isotope data can be examined to determine previous climate conditions and how those conditions affect the growth of trees.

### **13. Future Modifications and Plans**

None given.

### **14. Software**

#### **14.1 Software Description**

The ITRDB Program Library Version 2.1 is the latest version of the ITRDB Program Library, an extensive collection of programs to acquire, manipulate, analyze, and display tree ring data; they are accompanied by extensive documentation, including online help, and run from an easy-to-use DOS-based menu. Henri D. Grissino-Mayer wrote many of the programs as well as the main menu, Richard L. Holmes contributed the famous Dendrochronology Program Library, and Edward R. Cook contributed the standardization program ARSTAN. Other contributors include Thierry Varem-Sanders, Oriol Bosch, and Paul Krusic, and to them we are very grateful. If you or anybody you work with has developed software you feel would be useful to the entire dendrochronological community, contact Henri D. Grissino-Mayer to see about incorporating the programs in the Program Library.

#### **14.2 Software Access**

Software access -- <http://tree.ltrr.arizona.edu/~grissino/software.htm>

For tree ring data: (source: Henri Grissino-Mayer <http://tree.ltrr.arizona.edu/~grissino/software.htm>)

## **15. Data Access**

The TE-05 tree ring and carbon isotope ratio data are available from the Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).

### **15.1 Contact Information**

For BOREAS data and documentation please contact:

ORNL DAAC User Services  
Oak Ridge National Laboratory  
P.O. Box 2008 MS-6407  
Oak Ridge, TN 37831-6407  
Phone: (423) 241-3952  
Fax: (423) 574-4665  
E-mail: [ornldaac@ornl.gov](mailto:ornldaac@ornl.gov) or [ornl@eos.nasa.gov](mailto:ornl@eos.nasa.gov)

### **15.2 Data Center Identification**

Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) for Biogeochemical Dynamics  
<http://www-eosdis.ornl.gov/>.

### **15.3 Procedures for Obtaining Data**

Users may obtain data directly through the ORNL DAAC online search and order system [<http://www-eosdis.ornl.gov/>] and the anonymous FTP site [<ftp://www-eosdis.ornl.gov/data/>] or by contacting User Services by electronic mail, telephone, fax, letter, or personal visit using the contact information in Section 15.1.

### **15.4 Data Center Status/Plans**

The ORNL DAAC is the primary source for BOREAS field measurement, image, GIS, and hardcopy data products. The BOREAS CD-ROM and data referenced or listed in inventories on the CD-ROM are available from the ORNL DAAC.

## **16. Output Products and Availability**

### **16.1 Tape Products**

None.

### **16.2 Film Products**

None.

### **16.3 Other Products**

These data are available on the BOREAS CD-ROM series.

## 20. Document Information

### 20.1 Document Revision Date(s)

Written: 03-Apr-1997

Last Updated: 02-Jun-1999

### 20.2 Document Review Date(s)

BORIS Review: 18-Jun-1997

Science Review: 27-Jan-1998

### 20.3 Document ID

### 20.4 Citation

When using these data, please include the following acknowledgment as well as citations of relevant papers in Section 17.2:

The efforts of Jim Ehleringer, University of Utah; Larry Flanagan, Carleton University; and J. Renee Brooks, University of South Florida in collecting and providing these data are greatly appreciated.

If using data from the BOREAS CD-ROM series, also reference the data as:

Ehleringer, J. and L. Flanagan, "Vegetation-Atmosphere CO<sub>2</sub> and H<sub>2</sub>O Exchange Processes: Stable Isotope Analyses." In Collected Data of The Boreal Ecosystem-Atmosphere Study. Eds. J. Newcomer, D. Landis, S. Conrad, S. Curd, K. Huemmrich, D. Knapp, A. Morrell, J. Nickeson, A. Papagno, D. Rinker, R. Strub, T. Twine, F. Hall, and P. Sellers. CD-ROM. NASA, 2000.

Also, cite the BOREAS CD-ROM set as:

Newcomer, J., D. Landis, S. Conrad, S. Curd, K. Huemmrich, D. Knapp, A. Morrell, J. Nickeson, A. Papagno, D. Rinker, R. Strub, T. Twine, F. Hall, and P. Sellers, eds. Collected Data of The Boreal Ecosystem-Atmosphere Study. NASA. CD-ROM. NASA, 2000.

12a. DISTRIBUTION / AVAILABILITY STATEMENT Unclassified-Unlimited Subject Category: 43 Report available from the NASA Center for AeroSpace Information, 7121 Standard Drive, Hanover, MD 21076-1320. (301) 621-0390.			12b. DISTRIBUTION CODE	
13. ABSTRACT (Maximum 200 words)  The BOREAS TE-5 team collected several data sets to investigate the vegetation-atmosphere CO <sub>2</sub> and H <sub>2</sub> O exchange processes. These data include tree ring widths and cellulose carbon isotope data from coniferous trees collected at the BOREAS NSA and SSA in 1993 and 1994 by the BOREAS TE-05 team. Ring width data are provided for both Picea mariana and Pinus banksiana. The carbon isotope data are provided only for Pinus banksiana. The data are provided in tabular ASCII files.
